SUMMARY

Associate AI Engineer with 10 months of hands-on experience in designing data-driven machine learning systems, NLP-based automation, and operational analytics for a crypto-based fintech platform. Strong experience in intent classification, text preprocessing, semantic similarity, Elasticsearch analytics, user monitoring, and engagement reporting. Experienced in building AI prototypes, auditing user workflows, and supporting business operations through data and automation.

PROFESSIONAL EXPERIENCE

Associate AI Engineer

Json Technologies Pvt. Ltd.

FirstDex (Crypto & FinTech Platform)

Feb 2025 – Nov 2025 | Hyderabad, India

Core Technologies: Python, Machine Learning, NLP, BERT, Elasticsearch, Automation, iOS Deployment

Machine Learning & NLP Automation (Customer Support Classification)

- Designed and implemented a **BERT-based NLP text classification system** to categorize customer support queries across **20–30+ intent categories** (deposits, withdrawals, swaps, cross-chain delays, KYC, TDS, market volatility).
- Built and curated a **labeled support-query dataset**, performing **text cleaning, normalization, and label encoding** with explicit label2id / id2label mappings.
- Split data into **training and validation sets (80/20, stratified)** to preserve class distribution.
- Fine-tuned **bert-base-uncased (BertForSequenceClassification)** using **PyTorch, AdamW optimizer**, and mini-batch training.
- Implemented **custom training and validation loops**, tracking loss and accuracy across epochs.
- Achieved ~93% validation accuracy**, with stable convergence observed over multiple training epochs.
- Saved trained **model, tokenizer, and label metadata**, and built an **inference function** to classify new support queries.
- Used model outputs to support **support-workflow automation and internal reporting**.

AI Assistant Prototype (Planned for firstdex.in 📄)

- Designed an **AI assistant prototype** intended for future website-based customer support.
- Reused the existing BERT-based intent classification model** as the core intelligence layer.
- Applied **semantic similarity (sentence embeddings, cosine similarity)** to detect follow-up queries.
- Integrated **emotion detection and toxicity classification** to guide escalation and safety behavior.
- Completed as a **functional prototype; deployment pending infrastructure readiness**

Data Engineering, Reporting & User Analytics

- Worked extensively with **Elasticsearch Cloud**, querying indices related to deposits, withdrawals, swaps, and cross-swaps.
- Built **aggregations and date-based analytics** to generate blockchain-wise and daily operational reports.
- Monitored **daily user onboarding activity**, tracking successful and incomplete onboarding cases.
- Audited onboarding flows to identify **mid-process drop-offs** and incomplete user journeys.
- Triggered **follow-up actions and notifications** for users who stopped onboarding.
- Generated **daily operational reports**, including:
 - New user onboarding counts
 - Pending or incomplete onboarding cases
 - Platform usage summaries
- Coordinated **user awareness and engagement communications**, including feature updates and process notifications.
- Provided internal teams with **clear visibility into user growth, drop-offs, and engagement trends**.

Platform Deployment & Support Automation

- Handled **iOS application build and release workflows** using **MacInCloud**.
- Resolved dependency issues across **React Native, Expo, CocoaPods, Node, and Yarn**.
- Deployed builds to **TestFlight** and released via **App Store Connect**.
- Integrated ML-based support classification with **Mailgun** for automated email ingestion and rule-based responses.
- Implemented **scheduled batch workflows** to process incoming support queries.

AI-Assisted Product & Dashboard Prototyping

- Used **Hugging Face-based AI models** to generate **frontend UI prototypes** based on business and product requirements.
- Contributed to prototyping of multiple internal and customer-facing products, including:
 - **Digital wallet (FDX Pay)**
 - **Employer dashboard**
 - **Merchant dashboard**
 - **Blockchain explorer (FDX Scan)**
- Translated high-level functional requirements into **UI layouts and component structures**.
- Collaborated with backend developers by **handing over UI components** for API integration and further development.

Website & Content Enhancements

- Enhanced **firstdex.in** by creating:
 - FAQs (Deposits, Withdrawals, Swaps, KYC, Wallet Safety)
 - Token listings for **300+ tokens**
 - Help & support content and tutorial videos
- Improved user awareness and reduced repetitive support queries.

EDUCATION

Btech in Civil Engineering

Aurora's Scientific and Technological Institute, Hyderabad

2019 – 2022

Hyderabad, India

Relevant Coursework: Data Science, Machine Learning, NLP, Computer Vision, Deep Learning, Python, SQL, Power bi, MS Excel

SKILLS

Machine Learning & NLP BERT, NLP Text Classification, Intent Detection, Text Cleaning & Normalization, Feature Engineering, Model Evaluation, Semantic Similarity (Embeddings)

Programming & Data Python, Pandas, NumPy, scikit-learn

Data & Automation Elasticsearch (Aggregations, Queries, ILM), Reporting Pipelines, Workflow Automation, Batch Processing

Tools & Platforms PyTorch, Hugging Face Transformers, SentenceTransformers, Git, GitHub, MacInCloud, iOS TestFlight
